NQP's range of auxiliary lights is designed for drivers who place high demand on visibility, safety and reliability. With powerful LED technology, robust construction and modern design, the series delivers high performance for trucks, construction machinery and other commercial vehicles used in demanding conditions.

The series consists of three models – **Orion Black**, **Orion White** and **Nova** – which combine impressive brightness with smart features such as; position lights, hazard lights and boost mode on selected models. The robust aluminium construction, high degree of protection and E-approved design, ensure a long life and reliable operation in all weather conditions.

Whether you're driving long distances on the road, working on construction sites or needing maximum visibility in dark environments, NQP's auxiliary lights deliver a powerful and consistent light pattern that increases both safety and comfort behind the wheel. With a focus on quality, performance and durability, NQP is a natural choice for professional drivers.

NQP's work light series is designed for professional users who place high demand on reliability, durability and efficient lighting. With powerful LED technology, robust construction and compact design, the series delivers reliable lighting for trucks, construction machinery, agricultural machinery and other commercial vehicles where good visibility is essential.

The series consists of several models in different sizes and power levels that cover a wide range of applications. High-quality LED chips from OSRAM and Bridgelux.

Robust die-cast aluminum housing with IP68 protection rating ensures long life and reliable performance, even under demanding conditions with vibrations, dust and moisture.

Whether the work light is used as a work light or machine light, the NQP delivers a wide and even beam of light that improves visibility and increases safety. With a focus on quality, functionality and durability, the NQP work light is a natural choice for professional users who need reliable lighting – every day.

NQP's range of warning strobe lights, warning beams and marker lights is designed for professional users who place high demands on visibility, safety and reliability. The range includes compact warning strobe lights, warning beams as well as marker and position lights, which provides effective warning and clear vehicle marking for service vehicles, construction equipment, tow trucks, trailers and other commercial vehicles.

The products are designed with high-intensity LED technology, robust aluminum housings and a high degree of protection to ensure reliable operation, even under demanding conditions of vibration, dust and moisture. Several models offer selectable flashing patterns, low-profile designs and E-approved finishes for easy installation and safe use in professional environments.

Whether the need is to warn other road users, increase vehicle visibility or meet marking and position lighting requirements, the NQP range delivers high performance, long life and reliable functionality. With a focus on quality, safety and durability, the NQP is a natural choice for professional commercial vehicles and demanding work environments.

WARNING LIGHT BEAM

6

NQP's warning light bars combine **powerful LED technology**, modern design and robust construction for **high visibility** and **reliable performance**. They are designed for professional vehicles used in demanding working environments.

ADR LIGHTING

Our ADR lighting is designed to meet the high demands of transporting dangerous goods and operating in demanding Nordic conditions. The series includes ADR-approved work lights with robust construction and high brightness.

They are designed for demanding Nordic conditions and deliver reliable performance as well as safe and efficient lighting all year round. Developed for professional users who place high demands on reliability and quality.

7

NQP Bright ADR 25

25 W, 10–30 V, 2000 lm,
ADR-classified
101 x 130 x 37 mm

Article number: 22114

NQP Bright ADR 15

15 W, 10–30 V, 1500 lm,
ADR-classified
102 x 130 x 37 mm

Article number: 22113

NQP's range of ADR lighting is designed for professional users working with the transport of dangerous goods and in other environments where high demands are placed on safety, reliability and compliance with applicable regulations.

The series includes ADR-approved LED luminaires that are specifically designed for use on tankers, chemical transport vehicles, fuel vehicles and other vehicles covered by ADR regulations.

With robust aluminium construction, high degree of protection and efficient LED technology, NQP's ADR lighting delivers reliable performance, even in demanding Nordic conditions. The luminaires provide a wide and uniform light pattern that improves visibility when manoeuvring, reversing and working around the vehicle, while meeting current safety requirements for use in explosive environments.

Whether used as a work light or a reversing light, NQP's ADR lighting delivers high quality, long life and reliable operation. With a focus on safety, durability and compliance with ADR regulations, NQP is a natural choice for commercial vehicles transporting dangerous goods.

Morek is a well-established trading company that supplies quality products to the transportation industry.

We are ISO 9001 certified, and have our head office in Skytta outside Oslo. We have two branch offices in Trondheim and Sandnes respectively, as well as a subsidiary in Hässleholm in Sweden. We supply all equipment and parts to trailer manufacturers, truck body builders and automotive workshops for heavy vehicles.
